1 Introduction

This document, Volume 2a of the IHE Pathology and Laboratory Medicine (PaLM) Technical Framework, defines transactions used in two of the profiles of the IHE Pathology and Laboratory
220 Medicine domain: the Laboratory Testing Workflow (LTW) Profile and the Laboratory Device Automation (LDA) Profile.

1.1 Introduction to IHE

Integrating the Healthcare Enterprise (IHE) is an international initiative to promote the use of
225 standards to achieve interoperability among health information technology (HIT) systems and effective use of electronic health records (EHRs). IHE provides a forum for care providers, HIT experts and other stakeholders in several clinical and operational domains to reach consensus on standards-based solutions to critical interoperability issues.

The primary output of IHE is system implementation guides, called IHE Profiles. IHE publishes
230 each profile through a well-defined process of public review and trial implementation and gathers profiles that have reached final text status into an IHE Technical Framework, of which this volume is a part.

For general information regarding IHE, refer to www.ihe.net. It is strongly recommended that, prior to reading this volume, the reader familiarizes themselves with the concepts defined in the [IHE Technical Frameworks General Introduction](#).

1.2 Intended Audience

The intended audience of IHE Technical Frameworks Volume 2 is:

- IT departments of healthcare institutions
- Technical staff of vendors participating in the IHE initiative
- Experts involved in standards development

1.3 Overview of Technical Framework Volume 2

Volume 2 is comprised of several distinct sections:

- Section 1 provides background and reference material.
- Section 2 presents the conventions used in this volume to define the transactions.
- Section 3 defines Pathology and Laboratory Medicine transactions in detail, specifying
245 the roles for each actor, the standards employed, the information exchanged, and in some cases, implementation options for the transaction.

The appendices in Volume 2 provide clarification of technical details of the IHE data model and transactions. Code and message samples may also be stored on the IHE Google Drive. In this case, explicit links to the applicable Google Drive folder will be provided in the transaction text.

250 Due to the length of the document, some domains may divide Volume 2 into smaller volumes labeled 2a, 2b, etc. Also, in some cases, the Volume 2 appendices are gathered in Volume 2x.
For a brief overview of additional Technical Framework Volumes (TF-1, TF-3, TF-4), please see the IHE Technical Frameworks General Introduction, [Section 5 - Structure of the IHE Technical Frameworks](#).

255 **1.4 Comment Process**

IHE International welcomes comments on this document and the IHE initiative. Comments on the IHE initiative can be submitted by sending an email to the co-chairs and secretary of the Pathology and Laboratory Medicine domain committees at palm@ihe.net. Comments on this document can be submitted at http://ihe.net/PaLM_Public_Comments.

260 **1.5 Copyright Licenses**

IHE technical documents refer to, and make use of, a number of standards developed and published by several standards development organizations. Please refer to the IHE Technical Frameworks General Introduction, [Section 9 - Copyright Licenses](#) for copyright license information for frequently referenced base standards. Information pertaining to the use of IHE
265 International copyrighted materials is also available there.

1.6 Trademark

IHE[®] and the IHE logo are trademarks of the Healthcare Information Management Systems Society in the United States and trademarks of IHE Europe in the European Community. Please refer to the IHE Technical Frameworks General Introduction, [Section 10 - Trademark](#) for
270 information on their use.

1.7 Disclaimer Regarding Patent Rights

Attention is called to the possibility that implementation of the specifications in this document may require use of subject matter covered by patent rights. By publication of this document, no position is taken with respect to the existence or validity of any patent rights in connection
275 therewith. IHE International is not responsible for identifying Necessary Patent Claims for which a license may be required, for conducting inquiries into the legal validity or scope of Patents Claims or determining whether any licensing terms or conditions provided in connection with submission of a Letter of Assurance, if any, or in any licensing agreements are reasonable or non-discriminatory. Users of the specifications in this document are expressly advised that
280 determination of the validity of any patent rights, and the risk of infringement of such rights, is entirely their own responsibility. Further information about the IHE International patent disclosure process including links to forms for making disclosures is available at http://www.ihe.net/Patent_Disclosure_Process. Please address questions about the patent disclosure process to the secretary of the IHE International Board: secretary@ihe.net.

285 1.8 History of Document Changes

This section provides a brief summary of changes and additions to this document.

Date	Document Revision	Change Summary
July 2016	7.0	Adoption of IHE_TF_Template_Vol2_Rev1.0_2014-07-01, Incorporation of the LAW Profile “Final Text”, Update of the LDA Profile by removal of the transactions transferred to LAW. Incorporation of option “labels & containers delivered” for the LBL Profile. Reorganization of Vol 2 content in 4 volumes: <ul style="list-style-type: none">- 2a contains LTW and LDA transactions (including CP-LAB-250),- 2b contains LAW transactions and specific appendices,- 2c contains LBL, LPOCT and LCSD transactions- 2x contains common appendices
June 2017	8.0	Harmonization of the description of field OBR-10 across LTW transactions (CP 254)
August 2018	9.0	<ul style="list-style-type: none">- Refine transitions of OBX-11, OBR-25, ORC-5 in [LAB-3], when correction after final (integration of CP 256)- Harmonization: LDA Profile references HL7 2.5.1 instead of 2.5 (integration of CP 261)- Moved Appendix A of Volume 2a to Volume 2x (as Appendix F)
August 2019	10.0	Republished without change in PaLM TF 10.0
April 2024	11.0	Updated some sections to coincide with latest template

2 Conventions

290 This document has adopted the following conventions for representing the framework concepts
and specifying how the standards upon which the IHE Technical Framework is based shall be
applied.

2.1 Transaction Modeling and Profiling Conventions

295 In order to maintain consistent documentation, modeling methods for IHE transactions and
profiling conventions for frequently used standards are maintained in the IHE Technical
Frameworks General Introduction, [Appendix E - Standards Profiling and Documentation
Conventions](#). Methods described include the Unified Modeling Language (UML) and standards
conventions include DICOM, HL7 v2.x, HL7 Clinical Document Architecture (CDA)
Documents, etc. These conventions are critical to understanding this volume and should be
300 reviewed prior to reading this text

Also refer to PaLM TF-2x: 2.1

2.2 Additional Standards Profiling Conventions

This section defines profiling conventions for standards which are not described in the [IHE
Technical Frameworks General Introduction](#)

305 Also refer to PaLM TF-2x: 2.2.

2.2.1 Message Granularity for Transactions Specified in this Volume

A message is generated from one trigger event in the real world. Therefore a message is related
to one single business object:

- A [LAB-1], [LAB-2] or [LAB-3] message is related to one Order or to one Order Group.
- 310 • A [LAB-4] or [LAB-5] message is related to one Work Order.
- A [LAB-21], [LAB-22], or [LAB-26] message is related to one SWOS.

2.3 Use of Coded Entities and Coding Schemes

315 Where applicable, coding schemes required by the DICOM[®], HL7[®], LOINC[®], and SNOMED[®]
standards are used in IHE Profiles. In the cases where such resources are not explicitly identified
by standards, implementations may utilize any resource (including proprietary or local) provided
any licensing/copyright requirements are satisfied.

IHE does produce and maintain certain terminology. OIDs and URNs have been assigned for
specific uses. The IHE process for managing OIDs and URNs is described at
http://wiki.ihe.net/index.php/OID_Registration.

320

3 IHE Transactions

This section defines each IHE Pathology and Laboratory Medicine transaction in detail, specifying the standards used and the information transferred.

3.1 Placer Order Management [LAB-1]

325 3.1.1 Scope

This transaction is used by the Order Placer to place an Order Group (i.e., a set of Orders to be tested together for a patient) or a standalone Order to the Order Filler. The transaction enables both Order Placer and Order Filler to notify all subsequent changes of status and/or content of each Order to the other side.

330 An Order contains a battery or a single test requested to a laboratory. The tests are to be performed on one or more in vitro specimens collected from the patient.

An Order accepted by the Order Filler is acknowledged to the Order Placer as scheduled by the laboratory: Order Status ORC-5 = “SC” (scheduled)

335 When the accurate specimens for this Order are accepted or collected by the laboratory the Order Filler notifies the start of the process to the Order Placer: Order Status ORC-5 = “IP” (in process).

When the first results of an Order are released the Order Filler notifies to the Order Placer the Order Status ORC-5 = “A” (some, but not all, results available).

340 When all results of an Order are released the Order Filler notifies to the Order Placer the Order Status ORC-5 = “CM” (completed).

Both Order Placer and Order Filler may update or cancel an existing Order. Update consists in replacing the ordered test or battery by another one.

An Order canceled ends with Order Status ORC-5 = “CA” (canceled).

345 To request an additional battery or test in an existing Order Group the Order Placer places a new Order added to this Order Group.

To generate an additional battery or test in an existing Order Group the Order Filler uses transaction [LAB-2], not [LAB-1].

350 In addition, if the “Report Facsimile For Order Group” Option is activated, this transaction MAY include into an Order Group placed, the request for the facsimile of the report related to that Order Group.

3.1.2 Actor Roles

Figure 3.1.2-1: Use Case Diagram

Table 3.1.2-1: Actor Roles

Actor:	Order Placer
Role:	Places, updates, cancels and nullifies orders. Receives acceptance or rejection from the Order Filler. Receives Order content and status changes from the Order Filler.
Actor:	Order Filler
Role:	Receives orders. Checks the specimens required, and notifies the Order Placer of acceptance or refusal. Receives Order content changes from the Order Placer. Notifies content updates (removed batteries/tests) to the Order Placer. Notifies status changes (scheduled, started, cancelled, completed) to the Order Placer.

355

3.1.3 Referenced Standards

HL7 version 2.5.1:

- Chapter 2: "Control" --> generic segments and data types
- Chapter 3: "ADT" --> PID and PV1 segments
- Chapter 4: "Order Entry" --> OML and ORL messages
- Chapter 7: "Observation Reporting" --> SPM segment
- Chapter 13: "Clinical Laboratory Automation" --> SAC segment

360

3.1.3.1 HL7 2.5 OML Message Structures

HL7 v2.5 chapter 4, offers three different message structures for the OML message type:

- 365
- OML^O21^OML_O21: **laboratory order message**. This is a battery/panel/test-centric message structure. The applicative acknowledgement is ORL^O22^ORL_O22
 - OML^O33^OML_O33: **Laboratory order for multiple orders related to a single specimen**. This is a specimen-centric structure providing for each specimen a list of containers and a list of batteries (ORC/OBR segment groups) using this specimen. The batteries are not related to the containers. The applicative acknowledgement is ORL^O34^ORL_O34.
 - OML^O35^OML_O35: **Laboratory order for multiple orders related to a single container of a specimen**. This message structure provides for each specimen a list of containers, and for each container the list of batteries that are to be performed on that container. This structure is more appropriate when the ordered batteries are sorted by container. The applicative acknowledgement is ORL^O36^ORL_O36.
- 370
- 375

3.1.3.2 Constraints on OML Message Structures added by Transaction [LAB-1]

Transaction [LAB-1] supports the three message structures listed above, and adds the following constraints:

- 380
- Each of the three message structures can convey in field ORC-1 the same trigger event, which can be:
 - the creation of a new order (NW) by the Order Placer,
 - the replacement (RP) of a test or battery requested by the Order Placer,
 - the replacement unsolicited (RU) of a test or battery decided on the Order Filler side,
 - the status change (SC) of an order recorded by the Order Filler,
 - the cancellation (CA) of an order requested by the Order Placer,
 - the cancellation unsolicited (OC) of an order decided on the Order Filler side.
 - [LAB-1] carries all clinical observations provided by the ordering provider, such as allergy, therapy, diagnosis, temperature, urine volume, blood pressure, within observation segments (OBX) that accompany the order. This choice has been made to simplify the building and parsing of the messages. All these specific patient observations are sent in the OML message, in OBX segments.
 - [LAB-1] restrains timing/quantity to one execution per order. The main reason for this choice is:
- 385
- 390
- 395
- The only operation that would have needed the iteration features provided by the segment TQ1 is the specimen collection. In this transaction this operation is not triggered by any message: It is an internal operation performed within the Order Placer or the Order Filler, depending on the organization. All orders sent to laboratories require one single execution, even the studies based on a temporal series of specimens. For example a serum

400 glucose tolerance study is an atomic order to be performed once, taking into account all
 the specimens to be tested.

3.1.4 Messages

405 In all interactions below, the initiator chooses the OML message structure appropriate to its
 orders. The responder SHALL respond with the corresponding ORL message structure. An OML
 message shall be responded to with exactly one ORL message. The Filler Order Number
 (assigned by the Order Filler application) is required in the ORL messages.

Simplification of the message flow when Order Placer and Order Results Tracker Actors are
grouped:

410 The blue message flows “Order status change” notified by the Order Filler to the Order Placer in
 the figure below happen only when the Order Placer and the Order Results Tracker are not
 grouped together.

415 Whenever the Order Placer and the Order Results Tracker are grouped in the same system, the
 transaction [LAB-3] message carrying the status change and possible new results is sufficient to
 inform that application of the new status of the Order. An “Order status change” message in
 [LAB-1] would be redundant in that case. Therefore, when exchanging with a grouped Order
 Placer/Order Results Tracker, the Order Filler SHALL NOT send the redundant message “Order
 Status Change” from transaction [LAB-1] (marked in blue in the figure below).

420 The figure below shows the flow of messages in the normal process of a placer order, from placing of the order by the Order Placer, to the "order completed" event notified by the Order Filler.

Figure 3.1.4-1: Normal process of a placer order

425 The figure below shows the flow of messages in case of cancellation of an order by the Order Placer. The Order Filler accepts the cancellation only if the processing has not started yet, particularly if no work order has been sent to the Automation Manager (through transaction [LAB-4]).

430

435

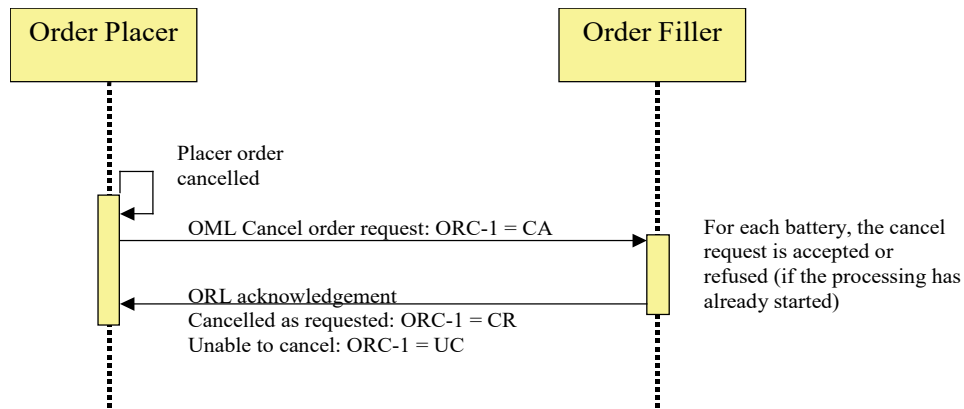

Figure 3.1.4-2: Cancellation of an order by the Order Placer

The figure below shows the flow of messages in case of cancellation of an order by the Order Filler.

440

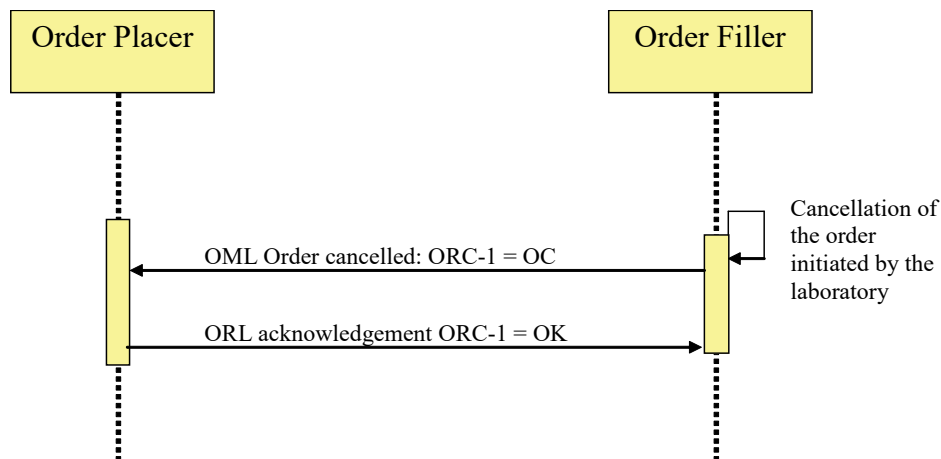

Figure 3.1.4-3: Cancellation by Order Filler

3.1.4.1 Message OML^O21 and its Acknowledgement ORL^O22

445 This battery/panel/test centric message pair contains a list of ordered batteries belonging to zero or one Order Group, a list of specimens underneath each battery/panel/test, and a list of containers underneath each specimen. This structure implies duplication of specimen/container information whenever two batteries use the same specimen. It is particularly appropriate for ordering batteries that need several specimens (e.g., creatinine clearance, glucose tolerance test).

3.1.4.1.1 Trigger Events

450 The real events conveyed by ORC-1 are listed in Section 3.1.3.2.

3.1.4.1.2 Message Semantics

3.1.4.1.2.1 OML^O21 Static Definition

Table 3.1.4.1.2.1-1: OML^O21 Message Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message Header	R	[1..1]	2
[--- PATIENT begin	RE	[0..1]	
PID	Patient Identification	R	[1..1]	3
[--- PATIENT_VISIT begin	RE	[0..1]

{ [NTE] }	Notes and Comments - previous result	O	[0..*]	2
}	--- OBSERVATION_PRIOR end			
}	--- ORDER_PRIOR end			

Segment	Meaning	Usage	Card.	HL7 chapter
]]	--- PRIOR_RESULT end			
	--- OBSERVATION REQUEST end			
}	--- ORDER end			

455 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to “OML”, “O21” and “OML_O21”.

The triplet (ORC, TQ1, OBR) represents the Order (i.e., an ordered battery/test). In case of an Order Group, this triplet is repeated as many times as there are Orders in the Order Group.

460 The OBSERVATION repeatable segment group carries observations given by the ordering provider (patient temperature, blood pressure, weight, ...) with eventual comments (NTE).

The PRIOR RESULT segment group provides the prior results obtained for the same patient. Segment PID is not provided in this segment group because it is the same patient, and the laboratory is not concerned by the fact that this patient might have had a different identification when the prior results were produced.

465 Segment PV1, which is the first segment of the segment group PRIOR RESULT, is mandatory. The presence of this segment at this point in the message structure announces unambiguously a set of prior orders with related prior observations. The segment PV1 represents the patient visit (or encounter) during which these prior observations were produced. The only field mandatory in the segment PV1 is PV1-2 “Patient Class” (as shown in Volume 2x, Appendix C). If the sender
470 of this message does not know the patient class, it SHALL value the field PV1-2 “U”, which stands for “patient class unknown”.

The ORC appearing in the PRIOR RESULT segment group is mandatory and SHALL have its first field “Order Control” populated with “PR” (Prior results).

475 The SAC segment should be used only to provide information specific of that segment, i.e., having no placeholder in the SPM segment.

3.1.4.1.2.2 ORL^O22 Static Definition

Table 3.1.4.1.2.2-1: ORL^O22 Message Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[{ERR}]	Error	C	[0..*]	2
[--- RESPONSE begin	C	[0..1]	
[--- PATIENT begin	R	[1..1]	
[PID]	Patient Identification	O	[0..1]	3
{	--- ORDER begin	R	[1..*]	

Segment	Meaning	Usage	Card.	HL7 chapter

[{	--- TIMING begin	RE	[0..1]	
TQ1	Timing/Quantity	R	[1..1]	4
}]	--- TIMING end			
	--- OBSERVATION REQUEST begin	R	[1..1]	
OBR	Observation Request	R	[1..1]	4
[{	--- SPECIMEN begin	O	[0..1]	
SPM	Specimen	R	[1..1]	7
[{SAC}]	Specimen Container Details	O	[0..*]	7
}]	--- SPECIMEN end			
	--- OBSERVATION REQUEST end			
}	--- ORDER end			
]	--- PATIENT end			
]	--- RESPONSE end			

480 MSH-9 - Message Type (MSG) shall have its three components respectively valued to “ORL”, “O22” and “ORL_O22”.

The ERR segment shall be used in case of negative acknowledgement (when MSA-1 = AE or AR).

The RESPONSE segment group is mandatory unless in case of error (MSA-1 = AE or AR). This segment group carries the response of the Order Filler in the segments ORC and OBR.

485 The mandatory ORC and OBR segments in the repeatable ORDER segment group provide the response of the Order Filler for each order, in particular the ORC-1 Order Control field, which values are listed in the table of Section 3.1.4.1.3.

3.1.4.1.2.3 OBR Segment Static Definition

Table 3.1.4.1.2.3-1: OBR - Observation Request Segment

SEQ	LEN	DT	Usage	Card.	TBL#	ITEM#	Element name

490

OBR-2 Placer Order Number (EI), required in transaction [LAB-1].

Each ordered battery/test should be assigned to a unique Order, identified by a unique Placer Order Number. The same identifier will never be used twice by the Order Placer. The Placer Order Number is generated by the Order Placer and should be unique across all OBR segments across all messages.

495

OBR-3 Filler Order Number (EI), required if available.

Each Order should be assigned a unique Filler Order Number by the Order Filler. The same identifier will never be used twice by the Order Filler. The filler order number generated by the Order Filler should be unique across all OBR segments across all messages.

500 OBR-4 Universal Service Identifier (CE), required.

This field contains one ordered battery or test. A battery is composed of one or more tests or batteries.

505 Additionally, when the “Report Facsimile For Order Group” Option is activated, when placing an Order Group, the Order Placer MAY request this service in an extra (ORC/OBR) segment group. In that case this requested service SHALL be identified in this field using either the LOINC code: 11502-2^ LABORATORY REPORT.TOTAL^LN or one of the LOINC codes for laboratory specialties listed in LAB TF-3: Table 2.3.4.1.1-1. For instance, the request for a microbiology report facsimile shall populate OBR-4 with: 18725-2^ MICROBIOLOGY STUDIES^LN

510 OBR-5 Priority and OBR-6 Requested Date/Time are not supported. See TQ1 segment.

Condition predicate for OBR-7: this field is a copy of SPM-17.1. The information is provided when the placer of the order knows the time of the specimen collection.

OBR-8, OBR-12, OBR-14, OBR-15 fields are superseded by fields of the SPM segment.

OBR-10 Collector Identifier, required if available.

515 This repeatable field identifies the person who collected the specimen(s).

OBR-11 Specimen Action Code (ID), required if available.

The value of this field is dependent on the use case as described in Volume 1.

520 The field identifies the action to be taken with respect to the specimens that accompany or precede this order. The purpose of this field is to further qualify (when appropriate) the general action indicated by the order control code contained in the accompanying ORC segment.

HL7 Table 0065 - Specimen Action Code gives the valid values:

HL7 Table 0065 - Specimen Action Code

Value	Description	Comment
A	Add ordered tests to the existing specimen	
G	Generated order; reflex order	
L	Lab to obtain specimen from patient	
O	Specimen obtained by service other than Lab	
P	Pending specimen; Order sent prior to delivery	
R	Revised order	
S	Schedule the tests specified below	

OBR-13 Relevant Clinical information (ST), not supported.

525 Transaction [LAB-1] uses OBX segment to carry relevant clinical information, or a NTE segment below the OBR for more comment orientated information.

OBR-16 Ordering Provider (XCN), required.

OBR-17 Order Callback Phone Number (XTN), required if available.

530 This field contains one or two telephone numbers for reporting a status or a result using the standard format with extension and/or beeper number when applicable.

OBR-22 Results Rpt/Status Chng - Date/Time (TS), not used in [LAB-]1: OBR-22 is related to the results, not to the order. OBR-22 is related to OBR-25. ORC-9 contains the date/time of the latest status change of the ORDER.

OBR-24 Diagnostic Serv Sect ID (ID), conditional

535 Condition predicate: This field is RE for the Order Filler. The valid values are defined in HL7 Table 0074 - Diagnostic Service Section ID. The table below presents a subset of these valid values as identified in Volume 1.

HL7 Table 0074 - Diagnostic Service Section ID (subset)

Value	Description	Addressed by Laboratory TF 2003 - 2004
BG	Blood Gases	Yes
CH	Chemistry	Yes
CP	Cytopathology	
HM	Hematology	Yes
IMM	Immunology	Yes
LAB	Laboratory	Yes
MB	Microbiology	Yes
MCB	Mycobacteriology	Yes
MYC	Mycology	Yes
OSL	Outside Lab	
SR	Serology	Yes
TX	Toxicology	Yes
VR	Virology	Yes

540 OBR-25 Order Result Status (ID), Conditional.

Condition predicate: This field shall not be filled in messages sent by the Order Placer. This field shall be filled in messages sent by the Order Filler, according to HL7 Table 0123 described in Chapter 7 of HL7. The possible values for this field are a subset of this table:

545

HL7 Table 0123 - Result Status

Value	Description	Comment
O	Order received; specimen not yet received	

Value	Description	Comment
I	No results available; specimen received, procedure incomplete	
S	No results available; procedure scheduled, but not done	
R	Results stored; not yet verified	
P	Preliminary: A verified early result is available, final results not yet obtained	
F	Final results; results stored and verified. Can only be changed with a corrected result.	
C	Correction to results	
X	No results available. Order canceled	

Note: For the conditions of use of these values, please read Appendix C in Volume 2x: “Correlations of status between ORC, OBR and OBX”.

OBR-28 Result Copies To (XCN), required if available.

550 This field identifies the people who are to receive copies of the results. By local convention, either the ID number or the name may be absent. The Order Placer shall fill this field when it sends a new order for which there are persons or care units declared for receiving a copy of the results.

3.1.4.1.3 Expected Actions

555 **Table 3.1.4.1.3-1: Expected Actions by Responder in [LAB-1]**

Event	Initiator	Responder	Expected action by the responder
New order placed (NW)	Order Placer	Order Filler	check the order content, if accepted, assign a filler order number and store it, in wait for specimens, respond OK, otherwise respond “unable to accept” (UA)
Request for replacement of a test/battery (RP)	Order Placer	Order Filler	Check whether the action is possible, considering the work in progress on the order. If accepted respond “replaced as requested (RQ) otherwise respond “unable to “replace” (UM)
Request for cancellation of an order (CA)	Order Placer	Order Filler	Check whether the action is possible, considering the work in progress on the order. If accepted respond “canceled as requested (CR) otherwise respond “unable to “cancel” (UC)
Unsolicited replacement of a test/battery (RU)	Order Filler	Order Placer	Update the content of the order, and acknowledge (OK), keep the ordering provider informed of this order content change.
Unsolicited cancellation of a test/battery (OC)	Order Filler	Order Placer	Update the content of the order, and acknowledge (OK), keep the ordering provider informed of this order cancellation.

Event	Initiator	Responder	Expected action by the responder
Status change of an order (SC)	Order Filler	Order Placer	Update the status of the order, and acknowledge (OK), keep the ordering provider informed of the advancement of work on this order.

3.1.4.2 Message OML^O33 and its Acknowledgement ORL^O34

560 This specimen centric message pair contains a list of specimens. Each specimen may be associated with a list of containers, and is associated with a list of ordered batteries/tests (belonging to zero or one Order Group) to be performed on this specimen. This structure is particularly appropriate for ordering multiple batteries/tests on a specimen (e.g., in chemistry or microbiology).

3.1.4.2.1 Trigger Events

The real events conveyed by ORC-1 are listed in Section 3.1.3.2.

3.1.4.2.2 Message Semantics

565 3.1.4.2.2.1 OML^O33 Static Definition

Table 3.1.4.2.2.1-1: OML^O33 Message Static Definition

}	--- OBSERVATION PRIOR end			
}	--- ORDER PRIOR end			
}}	--- PRIOR RESULT end			
	--- OBSERVATION REQUEST end			
}	--- ORDER end			
}	--- SPECIMEN end			

MSH-9 - Message Type (MSG) shall have its three components respectively valued to “OML”, “O33”, and “OML_O33”.

570 The conditions on the OBSERVATION segment group are the same as for OML^O21.

The SAC segment should be used only to provide information specific of that segment, i.e., having no placeholder in the SPM segment. The PRIOR RESULT segment group provides the prior results obtained for the same patient. Segment PID is not provided in this segment group because it is the same patient, and the laboratory is not concerned by the fact that this patient might have had a different identification when the prior results were produced.

575

Segment PV1, which is the first segment of the segment group PRIOR RESULT, is mandatory. The presence of this segment at this point in the message structure announces unambiguously a set of prior orders with related prior observations. The segment PV1 represents the patient visit (or encounter) during which these prior observations were produced. The only field mandatory in the segment PV1 is PV1-2 “Patient Class” (as shown in Volume 2x, Appendix C). If the sender of this message does not know the patient class, it SHALL value the field PV1-2 “U”, which stands for “patient class unknown”.

580

The ORC appearing in the PRIOR RESULT segment group is mandatory and SHALL have its first field “Order Control” populated with “PR” (Prior results).

585 **3.1.4.2.2.2 ORL^O34 Static Definition**

Table 3.1.4.2.2.2-1: ORL^O34 Message Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[{ERR}]	Error	O	[0..*]	2
[--- RESPONSE begin	C	[0..1]

OBR	Observation Request	R	[1..1]	4
}	--- ORDER end			
}	--- SPECIMEN end			
]	--- PATIENT end			
]	--- RESPONSE end			

MSH-9 - Message Type (MSG) shall have its three components respectively valued to “ORL”, “O34” and “ORL_O34”.

590 The RESPONSE segment group is mandatory unless in case of error (MSA-1 = AE or AR). This segment group carries the response of the Order Filler in the segments ORC and OBR.

The mandatory ORC and OBR segments in the repeatable ORDER segment group provide the response of the Order Filler for each order, in particular the ORC-1 Order Control field, which values are listed in the table of Section 3.1.4.1.3.

595 **3.1.4.2.2.3 OBR Segment Static Definition**

See Section 3.1.4.1.2.3.

3.1.4.2.3 Expected Actions

Identical to Section 3.1.4.1.3

3.1.4.3 Message OML^O35 and its Acknowledgement ORL^O36

600 This message pair contains a list of specimens. Each specimen may be associated with one or more containers. Each container is associated with a list of ordered batteries/tests (belonging to zero or one Order Group) to be performed on the specimen in this container.

3.1.4.3.1 Trigger Events

The real events conveyed by ORC-1 are listed in Section 3.1.3.2.

605 **3.1.4.3.2 Message Semantics**

}	--- CONTAINER end			
}	--- SPECIMEN end			

610 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to “OML”, “O35” and “OML_O35”.

The conditions on the OBSERVATION segment group are the same as for message OML^O21.

The SAC segment below the SPM segment is mandatory in OML^O35 message structure.

615 The PRIOR RESULT segment group provides the prior results obtained for the same patient. Segment PID is not provided in this segment group because it is the same patient, and the laboratory is not concerned by the fact that this patient might have had a different identification when the prior results were produced.

620 Segment PV1, which is the first segment of the segment group PRIOR RESULT, is mandatory. The presence of this segment at this point in the message structure announces unambiguously a set of prior orders with related prior observations. The segment PV1 represents the patient visit (or encounter) during which these prior observations were produced. The only field mandatory in the segment PV1 is PV1-2 “Patient Class” (as shown in Volume 2x, Appendix C). If the sender of this message does not know the patient class, it SHALL value the field PV1-2 “U”, which stands for “patient class unknown”.

625 The ORC appearing in the PRIOR RESULT segment group is mandatory and SHALL have its first field “Order Control” populated with “PR” (Prior results).

3.1.4.3.2.2 ORL^O36 Static Definition

Table 3.1.4.3.2.2-1: ORL^O36 Message Static Definition

Segment	Meaning	Usage	Card.	HL7
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2

Segment	Meaning	Usage	Card.	HL7
[{ERR}]	Error	C	[0..*]	2
[--- RESPONSE begin	C	[0..1]	
[--- PATIENT begin	R	[1..1]

}	--- SPECIMEN end			
]	--- PATIENT end			
]	--- RESPONSE end			

630 MSH-9 - Message Type (MSG) shall have its three components respectively valued to “ORL”, “O36” and “ORL_O36”.

The RESPONSE segment group is mandatory unless in case of error (MSA-1 = AE or AR). This segment group carries the response of the Order Filler in the segments ORC and OBR.

635 The mandatory ORC and OBR segments in the repeatable ORDER segment group provide the response of the Order Filler for each order, in particular the ORC-1 Order Control field, which values are listed in the table of Section 3.1.4.1.3.

3.1.4.3.2.3 OBR Segment Static Definition

See Section 3.1.4.1.2.3.

3.1.4.3.3 Expected Actions

Identical to Section 3.1.4.1.3.

640 3.1.5 Security Considerations

The only security constraint is that both Order Result Tracker and Order Filler be grouped with a Consistent Time Client, as specified in PaLM TF-1, and that these two CT Clients be served by a common Consistent Time Server.

3.2 Filler Order Management [LAB-2]

645 3.2.1 Scope

This transaction is used by the Order Filler to inform the Order Placer that a new Order, standalone or embedded in an existing Order Group, has been generated on the laboratory side. By this transaction, the Order Filler requests the Order Placer to assign a unique Placer Order Number to this new Order. The Order contains a battery or a test to be performed by the
650 laboratory, using biological specimens collected from the subject.

3.2.2 Actor Roles

Figure 3.2.2-1: Use Case Diagram

Table 3.2.2-1: Actor Roles

Actor:	Order Placer
Role:	Receives filler orders. Notifies the Order Filler of acceptance with a placer number assigned, or refusal.
Actor:	Order Filler
Role:	Notifies filler orders to the Order Placer. Receives acceptance with a placer number assigned, or rejection.

655 3.2.3 Referenced Standards

HL7 version 2.5.1:

- Chapter 2: "Control" --> generic segments and data types
- Chapter 3: "ADT" --> PID and PV1 segments
- Chapter 4: "Order Entry" --> OML and ORL messages
- Chapter 7: "Observation Reporting" --> SPM segment
- Chapter 13: "Clinical Laboratory Automation" --> SAC segment

660

3.2.3.1 HL7 2.5 OML Message Structures

Identical to those listed in Section 3.1.3.1.

3.2.4 Messages

665 In all interactions below, the initiator chooses the OML message structure appropriate to its orders. The responder SHALL respond with the corresponding ORL message structure. An OML message shall be responded to with exactly one ORL message.

670 The figure below shows the flow of messages in the normal process of a filler order. A filler order is placed, and responded to by either a rejection or an acceptance and a placer number assigned to it.

The creation of a filler order may be triggered by a prior placer order, e.g., if the results of one of the previously ordered tests triggers the laboratory to perform additional tests. The creation of a filler order could also happen during the quality control performed by the laboratory on a new order received from the Order Placer: the laboratory may then decide that some extra battery that was not ordered should be added, e.g., regarding the pathology context.

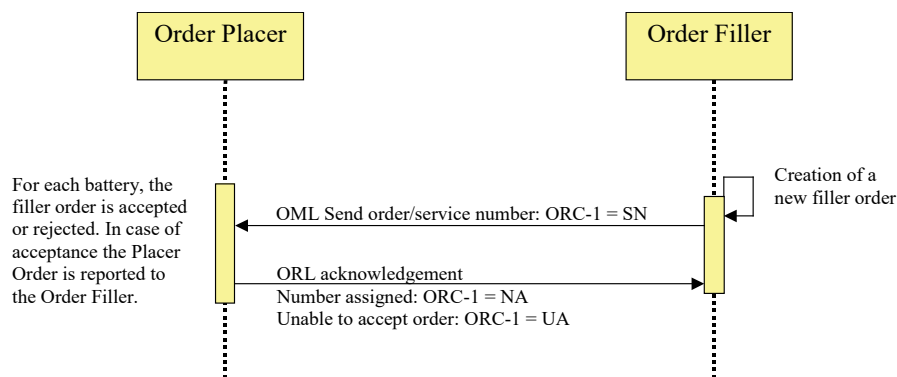

Figure 3.2.4-1: Process of a filler order

3.2.4.1 Message OML^O21 and its Acknowledgement ORL^O22

680 Battery/test centric message pair.

3.2.4.1.1 Trigger Events

The real event is the creation of a filler order and the request of a placer number for it.

3.2.4.1.2 Message Semantics

690

OBR-2 Placer Order Number (EI), conditional.

Condition predicate: Populated only in the ORL message sent back by the Order Placer to acknowledge an accepted filler order. In that case ORC-1 = "NA" (number assigned).

OBR-3 Filler Order Number (EI), required.

695 The filler order number should be unique across all OBR segments across all messages ever sent by the order filler.

OBR-4 Universal Service Identifier (CE), required

This field contains one ordered battery or test. A battery is composed of one or more tests or batteries.

700 OBR-5 Priority and OBR-6 Requested Date/Time

These two fields are not supported. See TQ1 segment.

Condition predicate for OBR-7: this field is a copy of SPM-17.1. The information is provided when the placer of the order knows the time of the specimen collection.

OBR-8, OBR-12, OBR-14, OBR-15 fields are superseded by fields of the SPM segment.

705 OBR-10 Collector Identifier, required if available.

This repeatable field identifies the person who collected the specimen(s).

OBR-11 Specimen Action Code (ID), required if available.

The value of this field is dependent on the use case as described in Volume 1.

710 The field identifies the action to be taken with respect to the specimens that accompany or precede this order. The purpose of this field is to further qualify (when appropriate) the general action indicated by the order control code contained in the accompanying ORC segment.

HL7 Table 0065 - Specimen Action Code gives the valid values:

HL7 Table 0065 - Specimen Action Code

Value	Description	Comment
G	Generated order; filler order	

715 OBR-13 Relevant Clinical information (ST), not supported.

Instead of OBR-13, transaction [LAB-2] uses OBX segment to carry relevant clinical information, or a NTE segment below the OBR for more comment orientated information.

OBR-16 Ordering Provider (XCN), required if available.

720 OBR-17 Order Callback Phone Number (XTN), required if available. One or two phone numbers.

OBR-24 Diagnostic Serv Sect ID (ID), required if available.

The valid values are defined in HL7 Table 0074 - Diagnostic Service Section ID. The table below presents a subset of these valid values as identified in Volume 1.

HL7 Table 0074 - Diagnostic Service Section ID (subset)

Value	Description	Addressed by Laboratory TF 2003 - 2004
BG	Blood Gases	Yes
CH	Chemistry	Yes
CP	Cytopathology	
HM	Hematology	Yes
IMM	Immunology	Yes
LAB	Laboratory	Yes
MB	Microbiology	Yes
MCB	Mycobacteriology	Yes
MYC	Mycology	Yes
OSL	Outside Lab	
SR	Serology	Yes
TX	Toxicology	Yes
VR	Virology	Yes

725

OBR-28 Result Copies To (XCN), required if available.

HL7 Definition: This field identifies the persons who are to receive copies of the results. By local convention, either the ID number or the name may be absent.

730 If there are known individuals or care units that should receive a copy of results related to this order, they should be listed here.

3.2.4.1.3 Expected Actions

Table 3.2.4.1.3-1: Expected Actions by Responder in [LAB-2]

Event	Initiator	Responder	Expected action by the responder
Request a placer number for a filler order	Order Filler	Order Placer	check the order content, if accepted, assign a placer order number, store it, and send it in the response “number assigned” (NA), otherwise respond “unable to accept” (UA)

3.2.4.2 Message OML^O33 and its Acknowledgement ORL^O34

Specimen centric message pair.

735 3.2.4.2.1 Trigger Events

The real event is the creation of a filler order and the request of a placer number for it.

3.2.4.2.2 Message Semantics

3.2.4.2.2.1 OML^O33 Static Definition

See Section 3.1.4.2.2.1.

740 3.2.4.2.2.2 ORL^O34 Static Definition

See Section 3.1.4.2.2.2.

3.2.4.3 Message OML^O35 and its Acknowledgement ORL^O36

Specimen/container centric message pair.

3.2.4.3.1 Trigger Events

The real event is the creation of a filler order and the request of a placer number for it.

750 3.2.4.3.2 Message Semantics

3.2.4.3.2.1 OML^O35 Static Definition

See Section 3.1.4.3.2.1.

3.2.4.3.2.2 ORL^O36 Static Definition

See Section 3.1.4.3.2.2.

755 **3.2.4.3.2.3 OBR Segment Static Definition**

See Section 3.2.4.1.2.3.

3.2.4.3.3 Expected Actions

See Section 3.2.4.1.3.

3.2.5 Security Consideration

760 The only security constraint is that both Order Result Tracker and Order Filler be grouped with a Consistent Time Client, as specified in PaLM TF-1, and that these two CT Clients be served by a common Consistent Time Server.

3.3 Order Results Management [LAB-3]

765 3.3.1 Scope

This transaction notifies the Order Result Tracker of requested tests upon creation of an order or reception of a specimen in the laboratory. It transmits the observation results from the Order Filler to the Order Result Tracker, when a result is acquired, clinically validated, modified or deleted at the Order Filler level. Another goal of this transaction is to provide the Order Result Tracker with the complete sorted set of results related to an Order Group or to an Order. The Order Result Tracker shall store these results in the sorting order given by the Order Filler. In addition, if the “Report Facsimile For Order Group” Option is activated, this transaction MAY provide in the results messages related to an Order Group a PDF report built by the OF presenting the releasable results of this Order Group.

770
775 In order to maintain consistency between order and result messages, the result messages of transaction [LAB-3] should refer to primary specimen even in the case where some of the observations are performed on secondary samples that are derived from primary specimen after specific preparation.

3.3.2 Actor Roles

780

Figure 3.3.2-1: Use Case Diagram

Table 3.3.2-1: Actor Roles

Actor:	Order Filler
Role:	<p>Sends notification to the Order Result Tracker for specimen arrival, acquisition of technically validated results, clinical validation of results, modification/cancellation of results and deletion of tests.</p> <p>Provides the complete sorted set of results related to an Order Group or to an order.</p> <p>In case the “Report Facsimile For Order Group” Option is in use, upon request from the OP the OF complements its results messages related to an Order Group and carrying some clinically validated results, with a link to the PDF report recapitulating the set of clinically validated results completed for this Order Group.</p>

Actor:	Order Result Tracker
Role:	Receives results for orders from the Order Filler, gives access to these orders and results to the healthcare enterprise, respects the sorting order of the results as received from the Order Filler. In case the “Report Facsimile For Order Group” Option is in use, when receiving a result message related to an Order Group providing a link to the PDF report, the ORT imports this PDF file immediately, and integrates it with the set of results received.

3.3.3 Referenced Standards

785 HL7 version 2.5.1:

- Chapter 2: "Control" --> generic segments and data types
- Chapter 3: "ADT" --> PID and PV1 segments
- Chapter 4: "Order Entry" --> OML and ORL messages
- Chapter 7: "Observation Reporting" --> SPM segment

790 3.3.3.1 HL7 2.5 Result Message Structures

Transaction [LAB-3] admits two message structures from the base standard:

- The OUL^R22 message is designed for specimen centered result reporting.
- The ORU^R01 message is designed for order centered result reporting.

3.3.3.2 Constraints on Result Message Structures added by Transaction [LAB-3]

795 In both message structures listed above, the order in which the OBX segments appear defines the sorting order for the presentation of the results for a given battery or specimen. In this respect, the Order Filler shall transmit all available results for the battery or specimen in recapitulative mode no matter whether they have already been transmitted or not.

An Order Filler MAY send whichever message structure depending upon its own business rules.

800 An Order Result Tracker SHALL be able to receive both message structures.

3.3.4 Messages

805 The figures below show the flow of messages that occurs during normal process of a filler order, from the reception of specimen or entry of the order in the laboratory, up to the completion of this order and visualization of results by an end user on the Order Result Tracker. For each triggering event of an OUL or ORU message, the value of the result status of the OBR (OBR-25) is indicated.

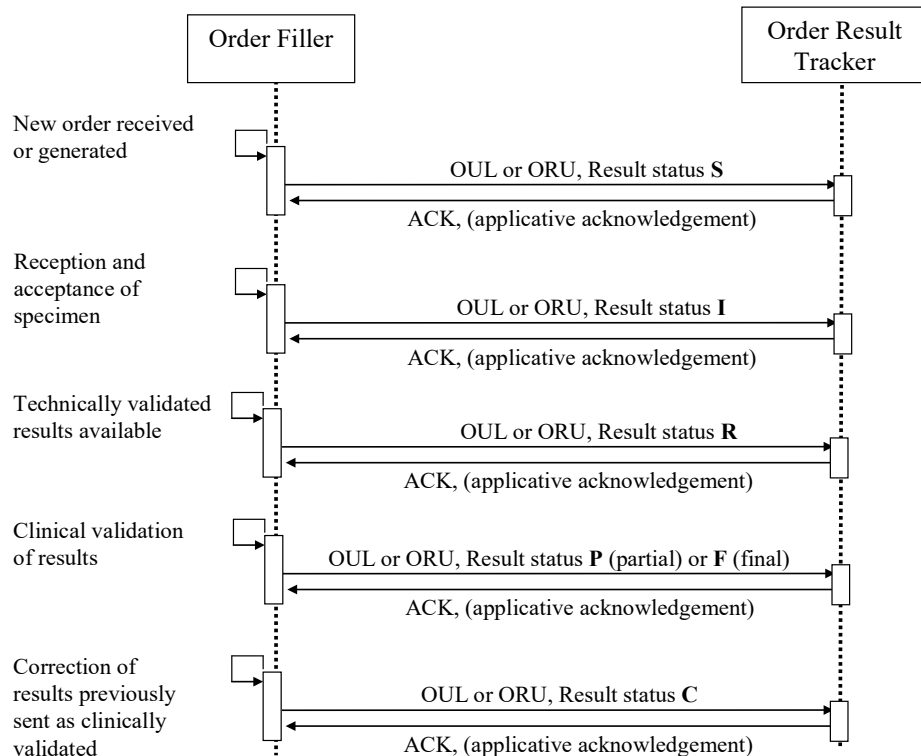

Figure 3.3.4-1: Normal process for management of results of a filler order

810 The first interaction appearing in this diagram is triggered by the accession of the order or of the Order Group by the Order Filler application. The Order Result Status (OBR-25) is valued:

- "S" (Scheduled) if the specimen is not received or collected yet.
- "I" if the specimen is available in lab.

815 In this first message, the date/time of transaction for the Order (ORC-9) is a good approximation of the date/time of accession of the Order by the Order Filler application. For an Order Group identified by ORC-4 and comprising several orders, the minimum value of all ORC-9 in the corresponding ORC segments is the approximation of the date/time of accession of the Order Group by the Order Filler application.

820 The decision whether to deliver or not technically validated results (using OBR-25 "Result Status" "R") to the Order Result Tracker is driven by organization rules specific to each healthcare enterprise. These rules may take account of the order priority (TQ1-9), the ordering provider, the particular ordered battery, the executing laboratory, the observation result itself...

825 This Technical Framework does not make any assertion on these rules. It only states that an Order Filler MUST be able to send all the result statuses mentioned in the above diagram, and doing so, MUST conform to the correlation diagrams and transition diagrams presented in of PaLM TF-2x: Appendix C.

The same remark applies to the sending of partial clinically validated results (using OBR-25 “Result Status” “P”).

830 At any time during the process, an ordered test/battery of the order can be deleted from the filler order by the laboratory, which should trigger a message to the Order Result Tracker, with OBR-25 “Result Status” set to “X” for this particular Order, as shown below.

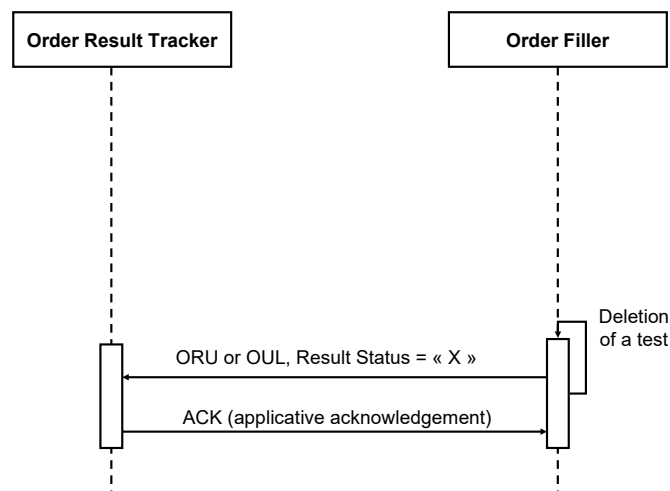

Figure 3.3.4-2: Deletion of a test by the Order Filler

3.3.4.1 Message OUL^R22

835 Preferred message structure for specimen centered result reporting.

3.3.4.1.1 Trigger Events

The following events detected by the Order Filler application (LIS) trigger the sending of an OUL or of an ORU message to the Order Result Tracker:

- Entry of an order at the laboratory level for an already collected specimen
- 840 • Reception and acceptance of a specimen for an existing order
- Acquisition of some technically validated results, in the context where transmission of such results is expected by the ward staff.
- Clinical validation of results
- Correction of results previously transmitted

- 845
- Cancellation of results previously transmitted
 - Deletion of tests

3.3.4.1.2 Message Semantics

3.3.4.1.2.1 OUL^R22 Static Definition

Table 3.3.4.1.2.1-1: OUL^R22 static definition

[{NTE}]	Comment of the result	C	[0..*]	2
}]	--- RESULT end			
}	--- ORDER end			
}	--- SPECIMEN end			

850

Field MSH-9 – Message Type shall have its three components valued as follows:
OUL^R22^OUL_R22

For specimen oriented observation message, additional parameters that are related to the specimen (e.g., Anatomic origin, Collection procedure) should be transmitted in OBX segments that immediately follow the SPM segment.

855

For each set of observations (e.g., Microscopy; Culture; Antibiotic Susceptibility) the Order Filler should generate an OBR segment that identifies the Observation followed by a series of OBX segments, each of them carrying the result of an individual test/observation.

860 Following the SPM segment, the Order Filler should systematically transmit in the OUL
message, all OBR and OBX segments related to this SPM. This systematic transmission of all
observations linked to an SPM segment and their respective status may help the Order Result
Tracker to recover from an error situation, when for some hazardous reasons a previous OUL
message for the same request could not have been properly processed. For the same reason the
865 "U" value should not be used in the Observation Result Status field of an OBX segment (see
description of this segment in Appendix C of Volume 2x).

In case an observation previously transmitted is deleted, the Order Filler should transmit all OBX segments linked to the OBR to which the deleted observation relates to; and it should indicate the current status of each OBX segment. The Observation Result Status field of the OBX that correspond to the deleted observation should be valued with a "D".

870 Unless the Report Status field (OBR-25) of the OBR is valued with an "X" (deleted battery), the OBR segment shall always be followed by one or several OBX segments.

TQ1 and ORC segments shall be transmitted because they contain important information such as the priority of the order and the order group number.

3.3.4.1.2.2 OBR Segment Static Definition

875

Table 3.3.4.1.2.2-1: OBR - Observation Request Segment

49	2	IS	X	[0..0]	N	01647	Result Handling

OBR-2 Placer Order Number (EI), required if available

OBR-3 Filler Order Number (EI), required

880 This field is required. It allows the Order Result Tracker to link all the Tests/results of a request together. It also identifies the order at the Order Filler level.

OBR-4 Universal Service Identifier (CE), required

The first three sub-fields “Identifier”, “Text” and “Name of Coding System” are required.

The second sub-field “Text” allows the Order Result Tracker to manage the results without the help of Battery Master File.

885 The last three sub-fields are optional.

OBR-7 Observation Date/Time (TS), conditional

890 Condition predicate: If the order is related to one single specimen, then OBR-7 SHALL be populated with the content of SPM-17.1, which represents the physiologically relevant date-time (i.e., the time the specimen was collected from the patient). In all other situations this field OBR-7 SHALL be populated with a NULL value: ""

OBR-9 Collection Volume (CQ)

895 Since when it is needed by the laboratory and reported, the volume of collection is the result of an observation (sometimes done by the Order Placer) that can be used for calculation of other results (e.g., Creatinine Clearance); this information should be transferred in an OBX segment as all other results of observation. This field OBR-9 should consequently not be used in this transaction.

OBR-10 Collector Identifier (XCN)

This repeatable field identifies the person who collected the specimen(s).

OBR-11 Specimen Action Code (ID)

900 This field is only required in the following events:

- The order is entered at the Order Filler side. The value of the Action Code is A in this case.
- The battery or test has been added by the Order Filler for confirmation of a diagnostic (reflex testing); value is G in this case.

905 In all other triggering events of this transaction, this Action Code field is meaningless.

OBR-12 Danger Code (CE)

This field should not be used in this Technical Framework.

OBR-13 Relevant Clinical Information (ST)

910 Since it is stated in the HL7 V2.5 Chapter 7 that "for some orders this information may be sent on a more structured form as a series of OBX segments (see HL7 V2.5 Chapter 7) that

immediately follow the order segment", it is preferable and more consistent to systematically use OBX segments in the result message for sending Clinical Information.

OBR-14 Specimen Received Date/Time (TS)

This field should not be used; this information should be transmitted in an SPM segment.

915 OBR-15 Specimen Source (SPS)

As for OBR-13, if this information needs to be transmitted to the Order Result Tracker it is more consistent to transfer it in an OBX segment. This field should not be used.

OBR-16 Ordering Provider (XCN)

This field is required if it was part of the order sent by the Order Placer.

920 OBR-24 Diagnostic Serv Sect ID (ID)

This field is required if available. In case the Order Result Tracker receives part of the results of an entire order at different time, the Order Result Tracker can use this field for presenting all the batteries/test with the same Diagnostic Serv. Sect. ID together.

OBR-25 Result Status (ID)

925 This field is required and should be filled according to HL7 Table 0123 described in Chapter 4. Depending on the triggering event of the OUL or ORU message the possible values for this field are:

- 930 • Value I is used to indicate reception of specimen(s) at the laboratory. In case a battery or test requires more than one specimen (e.g., creatinine clearance) this I status has to be used when all the required specimens have been received. An OBR segment with this I status may be followed by OBX segments that contains result of observations performed at specimen collection time (e.g., volume of collected specimen).
- 935 • Value R, to indicate that some results are available and technically validated but not yet clinically validated.
- 940 • Value P, to indicate that some of the results, but not all, are available and have been clinically validated. The identity of the clinical expert should in this case be indicated in the OBR-32 field.
- 945 • Value F, to indicate that all results are available and have been clinically validated. The identity of the clinical expert should in this case be indicated in the OBR-32 field.
- 940 • Value C, to indicate that at least one result contained in one of the following OBX segments has been modified after the results have been transmitted with the F status. This value C SHALL NOT be used before results have been transmitted with the F status.
- 945 • Value X, to indicate that the battery/test has been deleted. This deletion could have been, either received from the Order Placer for an already received specimen and accepted by the Order Filler, or decided by the laboratory. This value X should not be used if some results for this test have already been transmitted.

- Value S, although the usage of this value is mainly in response to a Query message. It can be used in OUL messages for tests that have been added to the original request by the Order Filler (LIS). In this case, the value of the OBR-11 field (Action Code) should be either A, or G.

Note: For the conditions of use of these values, please read Volume 2x, Appendix C “Correlations of status between ORC, OBR and OBX”.

OBR-26 Parent Result (PRL), conditional

This field is used to report spawned orders in microbiology.

- 955 Condition predicate: Populated if OBR-11 (Specimen Action code) is valued "G".

OBR-28 Result Copies To (XCN)

This field may be used to indicate the list of recipients who will receive a hard copy of the results report, which may be useful information for users who have access to these results.

OBR-29 Parent (EIP), conditional

- 960 This field is used to report spawned orders in microbiology.

Condition predicate: Populated if OBR-11 (Specimen Action code) is valued "G".

OBR-32 Principal Result Interpreter (NDL)

This field is required when the value of the Results Status field (OBR-25) is P or F. The field identifies who validated the results, where, and when this clinical validation was performed. It describes completely the clinical validation step.

965

OBR-33 Assistant Result Interpreter (NDL)

This field is meaningless when the value of the Result Status field is different from P, F or C.

OBR-34 Technician (NDL)

This field should not be used, as all observations linked to the battery have not necessarily been performed by the same Technician. The OBX-16 (Responsible Observer) should be used instead.

970

OBR-35 Transcriptionist (NDL)

This field is only applicable when the final report has been dictated and transcribed, which is frequent for Histology and Cytology reports.

975

OBR-36 Scheduled - Date/Time (TS)

This field is optional and only applies when the value of the Result Status field (OBR-25) is S.

3.3.4.1.2.3 Semantic with the Option Report Facsimile for Order Group

When the option Report Facsimile for Order Group is activated the semantic of the result message and behavior of the actors is modified.

980

If the Order Placer requested this facsimile report service with an Order Group, then:

- 985 • When the Order Filler prepares a message containing some clinically validated results for this Order Group, it SHALL construct and make available in a shared repository the PDF report recapitulating all releasable results obtained by the sending laboratory for this Order Group, and SHALL include a link to this PDF report in the results message.
- When canceling some results previously transmitted with a PDF report facsimile, if after this cancellation occurs, no result from the sending laboratory remains releasable for this Order Group, then the Order Filler SHALL provide a nullified link in the results message, to request the cancellation without replacement of the report facsimile.
- 990 • An ORU^R01 message provides the link to the report in a dedicated ORDER_OBSERVATION segment group, appearing at the bottom of the message. This last ORDER_OBSERVATION segment group, which was requested by the Order Placer when the Order Group was placed, is composed of only 3 segments: ORC, OBR, OBX.
- 995 • An OUL^R22 message provides this link through in a dedicated ORDER segment group appearing at the end of the last SPECIMEN segment group of the message. This last ORDER segment group is composed of only 3 segments: OBR, ORC, OBX.
- In both message structures the 3 segments introducing the PDF report are populated as follows:

1000 The ORC segment contains at least these 3 fields:

Field	DT	Element name	Value	comment
ORC-1	ID	Order Control	SC	<i>A results message is always a Status Change.</i>
ORC-4	EI	Placer Group Number	<i>The Order Group number</i>	<i>The identifier assigned by the Order Placer to this Order Group.</i>
ORC-9	TS	Date/Time of Transaction	<i>Date time of the triggering event</i>	<i>Date/time of this release of the laboratory report produced for this Order Group.</i>

The OBR segment contains at least these 4 fields:

Field	DT	Element name	Value	comment
OBR-2	EI	Placer Order Number	As assigned by Order Placer	
OBR-3	EI	Filler Order Number	As assigned by Order Filler	
OBR-4	CE	Universal Service Identifier		
OBR-4.1	ST	Code	(1)	<i>This code announces the laboratory report</i>
OBR-4.2	ST	Text	(1)	<i>The LOINC name of this code</i>
OBR-4.3	ID	Name of Coding System	LN	<i>Coding system LOINC</i>

IHE Pathology & Laboratory Medicine Technical Framework, Vol. 2a (PaLM TF-2a):
Transactions

Field	DT	Element name	Value	comment
OBR-25	ID	Result Status	P, F, C, X	<i>The report is Preliminary, Final, Corrected (after final) or canceled (X). When existing, it contains only verified results (i.e., clinically validated).</i>

Note 1: Use either the LOINC code “11502-2” and the corresponding name “LABORATORY REPORT.TOTAL” or one of the LOINC codes for laboratory specialties listed in PaLM TF-3.

1005

The OBX segment contains at least these 6 fields:

Field	DT	Element name	Value	comment
OBX-1	SI	Set ID – OBX	1	
OBX-2	ID	Value Type	RP	<i>Reference Pointer</i>
OBX-3		Observation Identifier		
OBX-3.1	ST	Code	(1)	<i>The observation is the laboratory report itself</i>
OBX-3.2	ST	Text	(1)	<i>The LOINC name of this code</i>
OBX-3.3	ID	Name of Coding System	LN	<i>Coding system LOINC</i>
OBX-5	RP	Observation Value		
OBX-5.1	ST	Pointer	<i>URL of the laboratory report</i>	<i>The syntax of the URL SHALL be conformant with RFC1738 and RFC1808.</i>
OBX-5.2	HD	Application ID	<i>unique ID assigned to the OF application</i>	
OBX-5.3	ID	Type Of Data	AP	<i>Other application data. The report is not to be interpreted by a HL7 parser.</i>
OBX-5.4	ID	Subtype	PDF or JPG	<i>The laboratory report is in pdf or jpeg format</i>
OBX-11	ID	Observation Result Status	P, F, C, D, X (2)	<i>The report is Preliminary, Final, Corrected, Deleted, or cannot be produced (X). In the two latter cases (D or X) OBX-5.1 SHALL be nullified (, populated with two double quotes)</i>
OBX-13	ST	User Defined Access Checks	<i>P or empty</i>	<i>P means this report should be viewed only by privileged users.</i>

Note 1: Use either the LOINC ® code “11502-2” and the corresponding name “LABORATORY REPORT.TOTAL” or one of the LOINC codes for laboratory specialties listed in PaLM TF-3.

Note 2: In the situation where the order was previously reported as final, and the Order Filler wants to announce the pending correction of one or more results for this order, the previous report will be cleared by the message announcing this pending correction, using OBX-11 = ‘D’. Once the corrected values are verified and sent, the new report will accompany them.

1010

3.3.4.1.3 Expected Actions

1015

Table 3.3.4.1.3-1: Expected Actions by Responder in [LAB-3]

Event	Initiator	Responder	Expected action by the responder
Change of status of an order, with possible new or corrected or deleted or validated results for this order	Order Filler	Order Result Tracker	Store the status and content of the order, and acknowledge with OK.
Result message carrying a link to the pdf report, in the context of option Report Facsimile for Order Group	Order Filler	Order Result Tracker	The Order Result Tracker SHALL follow the link, retrieve the PDF report immediately, and store it attached to the Order Group and its current set of results, replacing any previous report facsimile for this Order Group with this new one.
Result message carrying a nullified link to the pdf report, in the context of option Report Facsimile for Order Group	Order Filler	Order Result Tracker	The Order Result Tracker SHALL mark the previous PDF report for this Order Group as canceled.

3.3.4.2 Message ORU^R01

Preferred message structure for order centered result reporting.

3.3.4.2.1 Trigger Events

1020

Identical to 3.3.4.1.1

3.3.4.2.2 Message Semantics

3.3.4.2.2.1 ORU^R01 Static Definition

Table 3.3.4.2.2.1-1: ORU^R01 static definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message Header	R	[1..1]	2
{	--- PATIENT_RESULT begin	R	[1..1]	
[--- PATIENT begin	RE	[0..1]	
PID	Patient Identification	R	[1..1]	3
[--- PATIENT_VISIT begin	RE	[0..1]	
PV1	Patient Visit	R	[1..1]	3
]	--- PATIENT_VISIT end			
]	--- PATIENT end			
{	--- ORDER_OBSERVATION begin	R	[1..*]	
ORC	Common Order (for one battery)	R	[1..1]	4
OBR	Observation Request	R	[1..1]	4
[{NTE}]	Comments on the order	O	[0..*]	2

Segment	Meaning	Usage	Card.	HL7 chapter
[{	--- TIMING begin	RE	[0..1]	
[{TQ1}]	Timing Quantity	R	[1..1]	4
}]	--- TIMING end			
[{	--- OBSERVATION begin	C	[0..*]	
OBX	Observation related to OBR	R	[1..1]	7
[{NTE}]	Comment of the result	RE	[0..*]	2
}]	--- OBSERVATION end			
[{	--- SPECIMEN begin	RE	[0..*]	
SPM	Specimen	R	[1..1]	7
[{OBX}]	Observation related to specimen	O	[0..*]	
}]	--- SPECIMEN end			
}	--- ORDER_OBSERVATION end			
}	--- PATIENT_RESULT end			

1025 Field MSH-9 – Message Type shall have its three components valued as follows:
ORU^R01^ORU_R01

Condition predicate for the OBSERVATION segment group: This group is present (one or more occurrence) only when OBR-25 from the preceding OBR segment is not in { “X”, “O”, “I”, “S”}.

1030 The observations and notes produced to fulfill an order are reported as OBX and NTE segments in the OBSERVATION segment group following the ORC/OBR pair representing this order. Each specimen used by this order is described as a SPM segment in an instance of the SPECIMEN segment group following the results of the order. Pre-analytical observations qualifying the usability or characteristics (e.g., volume, collection duration, defect ...) of the specimen may be reported in OBX attached to the SPM segment.

1035 Following the ORC/OBR, the Order Filler should systematically transmit in the message, all OBX and SPM segments related to this ORC/OBR. This systematic transmission of all observations linked to an OBR and their respective status may help the Order Result Tracker to recover from error situations.

1040 For the same reason the "U" value should not be used in the Observation Result Status field of an OBX segment.

In case an observation previously transmitted is deleted, the Order Filler should transmit all OBX segments linked to the OBR to which the deleted observation relates to; and it should indicate the current status of each OBX segment. The Observation Result Status field of the OBX that correspond to the deleted observation should be valued with a "D".

1045 Unless the Report Status field (OBR-25) of the OBR is valued with an "X" (deleted battery), the OBR segment shall always be followed by one or several SPM and OBX segments.

TQ1 and ORC segments shall be transmitted because they contain important information such as the priority of the order and the Order Group Number.

1050 **3.3.4.2.2.2 OBR Segment Static Definition**

Identical to Section 3.3.4.1.2.2.

3.3.4.2.2.3 Semantic with the Option Report Facsimile for Order Group

See Section 3.3.4.1.2.3.

3.3.4.2.3 Expected Actions

1055 See Section 3.3.4.1.3.

3.3.5 Security Considerations

The only security constraint is that both Order Result Tracker and Order Filler be grouped with a Consistent Time Client, as specified in PaLM TF-1, and that these two CT Clients be served by a common Consistent Time Server.

1060 **3.4 Work Order Management [LAB-4]**

3.4.1 Scope

This transaction is used when the Order Filler issues a new work order to the Automation Manager, or requests for the cancellation or modification of an existing work order.

3.4.2 Actor Roles

1065

Figure 3.4.2-1: Use Case Diagram

Table 3.4.2-1: Actor Roles

Actor:	Order Filler
Role:	Splits an order into a set of work orders, and sends each work order to the appropriate Automation Manager. Keeps the content of a work order aligned with its originating order, and sends requests to the Automation Manager for cancellation of the work order, or for replacement of its content, when needed.
Actor:	Automation Manager
Role:	Receives work orders from the order filler and organizes their fulfillment. Receives replacement and cancellation requests for work orders and applies them when possible.

3.4.3 Referenced Standards

HL7 version 2.5.1:

1070

- Chapter 2: "Control" --> generic segments and data types
- Chapter 3: "ADT" --> PID and PV1 segments
- Chapter 4: "Order Entry" --> OML and ORL messages
- Chapter 7: "Observation Reporting" --> SPM segment
- Chapter 13: "Clinical Laboratory Automation" --> SAC segment

1075 **3.4.3.1 Trigger Events (ORC-1 values) Supported by Transaction [LAB-4]**

Transaction [LAB-4] supports three message pairs, which share the same trigger events:

- the creation of a new work order (**NW**) by the Order Filler,
- the replacement (**RP**) of the test /battery in a work order requested by the Order Filler,
- the cancellation (**CA**) of a work order requested by the Order Filler,

1080 **3.4.4 Messages**

Figure 3.4.4-1: Work Order Management Interactions

3.4.4.1 Message OML^O21 and its Acknowledgement ORL^O22

1085 OML^O21 is a battery/test centric message, with specimen and container information conveyed within the ORDER segment group.

3.4.4.1.1 Trigger Events

See Section 3.4.3.1.

3.4.4.1.2 Message Semantics

3.4.4.1.2.1 OML^O21 Static Definition

1090

Table 3.4.4.1.2.1-1: OML^O21 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message Header	R	[1..1]	2
[--- PATIENT begin	O	[0..1]	
PID	Patient Identification	R	[1..1]	3
[PV1]	Patient Visit	RE	[0..1]	3
]	--- PATIENT end			
{	--- ORDER begin	R	[1..*]	
ORC	Common Order (for one battery)	R	[1..1]	4
[{TQ1}]	Timing Quantity	RE	[0..1]	4
[--- OBSERVATION REQUEST begin	O	[0..1]	
OBR	Observation Request	R	[1..1]	4
[TCD]	Test Code Details	O	[0..1]	13
[{	--- OBSERVATION begin	O	[0..*]	
OBX	Observation Result	R	[1..1]	7
[{NTE}]	Comment of the result	C	[0..*]	2

[{OBX}]	Additional specimen characteristics	O	[0..*]	7
}]	--- CONTAINER end			
}]	--- SPECIMEN end			
[{	--- PRIOR_RESULT begin	O	[0..*]	
PV1	Patient Visit - previous result	R	[1..1]	3
{	--- ORDER_PRIOR begin	R	[1..*]	
[ORC]	Common Order - previous result	R	[1..1]	4
OBR	Order Detail - previous result	R	[1..1]	4
{ [NTE] }	Notes and Comments - previous result	O	[0..*]	2
{	--- OBSERVATION_PRIOR begin	R	[1..*]	
OBX	Observation/Result - previous result	R	[1..1]	7
{ [NTE] }	Notes and Comments - previous result	O	[0..*]	2
}	--- OBSERVATION_PRIOR end			

Segment	Meaning	Usage	Card.	HL7 chapter
}	--- ORDER_PRIOR end			
]}]	--- PRIOR_RESULT end			
]	--- OBSERVATION REQUEST end			
}	--- ORDER end			

Field MSH-9 – Message Type shall have its three components valued as follows:
OML^O21^OML_O21

1095 PV1 is optional since the Automation Manager and the laboratory devices do not usually need the outpatient information.

The SPECIMEN group is required when the specimen has already been collected and prepared, and is registered in the Order Filler application. In this case, there is at least one SPM segment present in this group. Below each SPM segment, the condition of use of the SAC segment is the one described in the paragraph describing this segment, Section 3.10.

1100 The OBX segment in the OBSERVATION group is used for providing observations, which can support the execution of the work order, including the technical validation of its results.

1105 The optional and repeatable PRIOR RESULT segment group provides the prior results obtained for the same patient. Segment PID is not provided in this segment group because it is the same patient, and the laboratory is not concerned by the fact that this patient might have had a different identification when the prior results were produced.

1110 Segment PV1, which is the first segment of the segment group PRIOR RESULT, is mandatory. The presence of this segment at this point in the message structure announces unambiguously a set of prior orders with related prior observations. The segment PV1 represents the patient visit (or encounter) during which these prior observations were produced. The only field mandatory in the segment PV1 is PV1-2 “Patient Class” (as shown in Appendix C of Volume 2x). If the sender of this message does not know the patient class, it SHALL value the field PV1-2 “U”, which stands for “patient class unknown”.

The ORC appearing in the PRIOR RESULT segment group is mandatory and SHALL have its first field “Order Control” populated with “PR” (Prior results).

1115 **3.4.4.1.2.2 ORL^O22 Static Definition**

Table 3.4.4.1.2.2-1: ORL^O22 static definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[{ERR}]	Error	O	[0..*]	2

Segment	Meaning	Usage	Card.	HL7 chapter
[--- RESPONSE begin	X	[0..0]	
[--- PATIENT begin	O	[0..1]	
PID	Patient Identification	R	[1..1]	3
{	--- ORDER begin	R	[1..*]	
ORC	Common Order	R	[1..*]	4
[{TQ1}]	Timing/Quantity	RE	[0..1]	4
[--- OBSERVATION REQUEST begin	O	[0..1]	
OBR	Observation Request	R	[1..1]	4
[{	--- SPECIMEN begin	C	[0..*]	
SPM	Specimen	R	[1..1]	7
[{SAC}]	Specimen Container Details	C	[0..*]	7
}]	--- SPECIMEN end			
]	--- OBSERVATION end			
}]	--- OBSERVATION REQUEST end			
]	--- ORDER end			
]	--- PATIENT end			
]	--- RESPONSE end			

Field MSH-9 – Message Type shall have its three components valued as follows:
ORL^O22^ORL_O22

- 1120 This message never carries the RESPONSE segment group. It is therefore limited to the first two or three segments.

3.4.4.1.2.3 OBR Segment Static Definition

1130 3.4.4.1.3 Expected Actions

Table 3.4.4.1.3-1: Expected Actions by Responder in [LAB-4]

Event	Initiator	Responder	Expected action by the responder
New order placed (NW)	Order Filler	Automation Manager	check the work order content, if accepted, store it and respond OK, otherwise respond “unable to accept” (UA)
Request for replacement of a test/battery (RP)	Order Filler	Automation Manager	Check whether the action is possible, considering the work potentially already in progress on the work order. If accepted respond “replaced as requested (RQ) otherwise respond “unable to “replace” (UM)
Request for cancellation of an order (CA)	Order Filler	Automation Manager	Check whether the action is possible, considering the work potentially already in progress on the work order. If accepted respond “canceled as requested (CR) otherwise respond “unable to “cancel” (UC)

3.4.4.2 Message OML^O33 and its Acknowledgement ORL^O34

OML^O33 is a specimen centric message, with container and work order information conveyed within the SPECIMEN segment group.

1135 3.4.4.2.1 Trigger Events

See Section 3.4.3.1.

3.4.4.2.2 Message Semantics

3.4.4.2.2.1 OML^O33 Static Definition

Table 3.4.4.2.2.1-1: OML^O33 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message Header	R	[1..1]	2
[--- PATIENT begin	O	[0..1]	
PID	Patient Identification	R	[1..1]	3
[PV1]	Patient Visit	RE	[0..1]	3
]	--- PATIENT end			
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen	R	[1..1]	7
[{SAC}]	Specimen Container	O	[0..*]	
{	--- ORDER begin	R	[1..*]	
ORC	Common Order (for one battery)	R	[1..1]	4
[{TQ1}]	Timing Quantity	RE	[0..1]	4
[--- OBSERVATION REQUEST begin	O	[0..1]	
OBR	Observation Request	R	[1..1]	4
[TCD]	Test Code Details	O	[0..1]	13
[{OBX}]	Observation Result	C	[0..*]	7
{	--- PRIOR RESULT start	O	[0..*]	
[PV1]	Patient Visit	R	[1..1]	3
[ORC]	Common order – prior result	R	[1..1]	4
OBR	Order detail – prior result	R	[1..1]	4
{OBX}	Observation/Result – prior result	R	[1..*]	
[{NTE}]	Comment of the result	C	[0..*]	2
}	--- PRIOR RESULT end			
]	--- OBSERVATION REQUEST end			
}	--- ORDER end			
}	--- SPECIMEN end			

1140

MSH-9 - Message Type (MSG) shall have its three components respectively valued to “OML”, “O33”, and “OML_O33”.

The SAC segment should be used only to provide information specific to that segment, i.e., having no placeholder in the SPM segment.

1145 The usage of the PRIOR RESULT segment group is identical as in OML^O21. See Section 3.4.4.1.2.1.

3.4.4.2.2.2 ORL^O34 Static Definition

Table 3.4.4.2.2.2-1: ORL^O34 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[{ERR}]	Error	O	[0..*]	2
[--- RESPONSE begin	X	[0..0]	
[--- PATIENT begin	R	[1..1]	
[PID]	Patient Identification	R	[1..1]	3
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen	R	[1..1]	7
[{SAC}]	Specimen Container	O	[0..*]	13
[{	--- ORDER begin	O	[0..*]	
ORC	Common Order	R	[1..1]	4
[{TQ1}]	Timing/Quantity	RE	[0..1]	4
[OBR]	Observation Request	R	[1..1]	4
}]	--- ORDER end			
}	--- SPECIMEN end			
]	--- PATIENT end			
]	--- RESPONSE end			

1150 MSH-9 - Message Type (MSG) shall have its three components respectively valued to “ORL”, “O34” and “ORL_O34”.

This message never carries the RESPONSE segment group. It is therefore limited to the first two or three segments.

3.4.4.2.2.3 OBR Segment Static Definition

1155 Same as in in OML^O21. See Section 3.4.4.1.2.3.

3.4.4.2.2.4 TCD Segment Static Definition

Same as in OML^O21. See Section 3.4.4.1.2.4.

3.4.4.2.3 Expected Actions

See Section 3.4.4.1.3.

1160 3.4.4.3 Message OML^O35 and its Acknowledgement ORL^O36

OML^O35 is a specimen-in-a-container centric message, with container and work order information conveyed within the CONTAINER segment group.

3.4.4.3.1 Trigger Events

See Section 3.4.3.1.

1165 3.4.4.3.2 Message Semantics

3.4.4.3.2.1 OML^O35 Static Definition

Table 3.4.4.3.2.1-1: OML^O35 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
[--- PATIENT begin	O	[0..1]	
PID	Patient identification	R	[1..1]	3
[PV1]	Patient visit	RE	[0..1]	3
]	--- PATIENT end			
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen	R	[1..1]	7
{	--- CONTAINER begin	R	[1..*]	
SAC	Specimen Container	R	[1..1]	13
{	--- ORDER begin	R	[1..*]	
ORC	Common order	R	[1..1]	4
[{TQ1}]	Timing/Quantity Order Sequence	RE	[0..1]	4
[--- OBSERVATION REQUEST begin	O	[0..1]	
OBR	Observation Request	R	[1..1]	4
[TCD]	Test Code Details	O	[0..1]	13
[{OBX}]	Additional specimen characteristics	O	[0..*]	7
{	--- PRIOR RESULT begin	O	[0..*]	
[PV1]	Patient Visit	R	[1..1]	3
[ORC]	Common order – prior result	O	[0..1]	4
OBR	Order detail – prior result	R	[1..1]	4
{OBX}	Observation/Result - prior result	R	[1..*]	7

Segment	Meaning	Usage	Card.	HL7 chapter
}	--- PRIOR RESULT end			
]	--- OBSERVATION REQUEST end			
}	--- ORDER end			
}	--- CONTAINER end			
}	--- SPECIMEN end			

1170 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to “OML”, “O35” and “OML_O35”.

The SAC segment below the SPM segment is mandatory in OML^O35 message structure.

The usage of the PRIOR RESULT segment group and of the OBSERVATION segment group are identical as in OML^O21. See Section 3.4.4.1.2.1.

3.4.4.3.2.2 ORL^O36 Static Definition

1175

Table 3.4.4.3.2.2-1: ORL^O36 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R		2
MSA	Message Acknowledgement	R		2
[{ERR}]	Error	O		2
[--- RESPONSE begin	X	[0..0]	
[--- PATIENT begin	R	[1..1]	
[PID]	Patient Identification	O	[0..1]	3
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen	R	[1..1]	7
{	--- CONTAINER begin	R	[1..*]	
SAC	Specimen Container	R	[1..1]	13
[{	--- ORDER begin	O	[0..*]	
ORC	Common Order	R	[1..1]	4
[{TQ1}]	Timing/Quantity	RE	[0..1]	4
[OBR]	Observation Request	R		4
}]	--- ORDER end			
}	--- CONTAINER end			
}	--- SPECIMEN END			
]	--- PATIENT end			
]	--- RESPONSE end			

MSH-9 - Message Type (MSG) shall have its three components respectively valued to “ORL”, “O36” and “ORL_O36”.

1180 This message never carries the RESPONSE segment group. It is therefore limited to the first two or three segments.

3.4.4.3.2.3 OBR Segment Static Definition

Same as in in OML^O21. See Section 3.4.4.1.2.3.

3.4.4.3.2.4 TCD Segment Static Definition

Same as in OML^O21. See Section 3.4.4.1.2.4.

1185 3.4.4.3.3 Expected Actions

See Section 3.4.4.1.3.

3.4.5 Security Considerations

1190 The only security constraint is that both Order Result Tracker and Order Filler be grouped with a Consistent Time Client, as specified in PaLM TF-1, and that these two CT Clients be served by a common Consistent Time Server.

3.5 Test Results Management [LAB-5]

3.5.1 Scope

This transaction is used by the Automation Manager to transmit the test results fulfilling a work order to the Order Filler.

1195

3.5.2 Actor Roles

Figure 3.5.2-1: Use Case Diagram

Table 3.5.2-1: Actor Roles

Actor:	Order Filler
Role:	Receives test results fulfilling work orders from the Automation Manager
Actor:	Automation Manager
Role:	Performs the technical validation of the test results and sends the results technically validated to the Order Filler.

3.5.3 Referenced Standards

1200

HL7 version 2.5.1:

- Chapter 2: "Control" --> generic segments and data types
- Chapter 7: "Observation Reporting"

3.5.4 Messages

1205

Figure 3.5.4-1: Unsolicited Observation Message from Automation Manager

3.5.4.1 Message OUL^R22 and its Acknowledgement ACK^R22

The use of OUL^R22 is recommended when transferring multiple results related to a specimen.

3.5.4.1.1 Trigger Events

New test results for a work order are technically validated.

1210

3.5.4.1.2 Message Semantics

3.5.4.1.2.1 OUL^R22 Static Definition

Table 3.5.4.1.2.1-1: OUL^R22 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
[PID]	Patient Identification	RE	[0..1]	3
[PV1]	Patient Visit	O	[0..1]	3
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen information	R	[1..1]	7
[{ OBX }]	Observation Result (for Specimen)	O	[0..*]	7
[{	--- CONTAINER begin	0	[0..*]	
SAC	Container information	R	[1..1]	13
[INV]	Detailed Substance information (e.g., id, lot, manufacturer, ... of QC specimen)	O	[0..1]	13
}]	--- CONTAINER end			
{	--- ORDER begin	R	[1..*]	

Segment	Meaning	Usage	Card.	HL7 chapter
OBR	Observation Order	R	[1..1]	7
[ORC]	Common Order	O	[0..1]	4
[{NTE}]	Comment on the Work Order	O	[0..*]	2
[{	--- RESULT begin	O	[0..*]	
OBX	Observation Result	R	[1..1]	7
[TCD]	Test Code Detail	O	[0..1]	13
[{SID}]	Substance Identifier (e.g., reagents used for testing)	O	[0..*]	13
[{NTE}]	Notes and comments	O	[0..*]	
}]	--- RESULT end			
}	--- ORDER end			
}	--- SPECIMEN end			

1215 Field MSH-9 – Message Type shall have its three components valued as follows:
OUL^R22^OUL_R22

In case of notifying the test results of a patient's specimen the carrier information uses SAC.

3.5.4.1.2.2 ACK^R22 Static Definition

Table 3.5.4.1.2.2-1: ACK^R22 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[ERR]	Error	O	[0..1]	2

1220 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to "ACK", "R22" and "ACK".

3.5.4.1.3 Expected Actions

Table 3.5.4.1.3-1: Expected Actions by Responder in [LAB-5]

Event	Initiator	Responder	Expected action by the responder
Test result technically validated	Automation Manager	Order Filler	Store the results in the appropriate work order, and acknowledge with OK.

3.5.4.2 Message OUL^R23 and its Acknowledgement ACK^R23

1225 The use of OUL^R23 is recommended when transferring multiple results related to one or more specific containers with one or more specimens.

3.5.4.2.1 Trigger Events

New test results for a work order are technically validated.

3.5.4.2.2 Message Semantics

1230

3.5.4.2.2.1 OUL^R23 Static Definition

Table 3.5.4.2.2.1-1: OUL^R23

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
[PID]	Patient Identification	RE	[0..1]	3
[PV1]	Patient Visit	O	[0..1]	3
{	--- SPECIMEN begin	R	[1..*]	
SPM	Specimen information	R	[1..1]	7
[{ OBX }]	Observation Result (for Specimen)	O	[0..*]	7
{	--- CONTAINER begin	R	[1..*]	
SAC	Container information	R	[1..1]	13
[INV]	Detailed Substance information (e.g., id, lot, manufacturer, ... of QC specimen)	O	[0..1]	13
{	--- ORDER begin	R	[1..*]	
OBR	Observation Order	R	[1..1]	7
[ORC]	Common Order	O	[0..1]	4
[{NTE}]	Comment on the Work Order	O	[0..*]	2
[{	--- RESULT begin	O	[0..*]	
OBX	Observation Result	R	[1..1]	7
[TCD]	Test Code Detail	O	[0..1]	13
[{SID}]	Substance Identifier (e.g., reagents used for testing)	O	[0..*]	13
[{NTE}]	Notes and comments	O	[0..*]	
}]	--- RESULT end			
}	--- ORDER end			
}	--- CONTAINER end			
}	--- SPECIMEN end			

Field MSH-9 – Message Type shall have its three components valued as follows:
OUL^R23^OUL_R23.

1235

The carrier information in the case of notifying the test results of a patient's sample uses SAC. Refer to HL7 Chapter 13 for INV, SID segments and refer to HL7 Chapter 7 for CTI segment.

3.5.4.2.2.2 ACK^R23 Static Definition

Table 3.5.4.2.2.2-1: ACK^R23 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[ERR]	Error	O	[0..1]	2

1240 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to "ACK", "R23" and "ACK".

3.5.4.2.3 Expected Actions

See Section 3.5.4.1.3.

3.5.5 Security Considerations

1245 The only security constraint is that both Order Result Tracker and Order Filler be grouped with a Consistent Time Client, as specified in PaLM TF-1, and that these two CT Clients be served by a common Consistent Time Server.

3.6 Specimen Work Order Step Download [LAB-21]

3.6.1 Scope

1250 This transaction is used between an Automation Manager and a Pre/Post-processor working in download mode. It enables the Automation Manager to issue a new specimen work order step (SWOS) to the Pre/post-processor, or cancel or modify an existing SWOS previously sent. Modification may also be achieved by combining cancellation and sending of a new SWOS.

3.6.2 Actor Roles

1255

Figure 3.6.2-1: Use Case Diagram

Table 3.6.2-1: Actor Roles

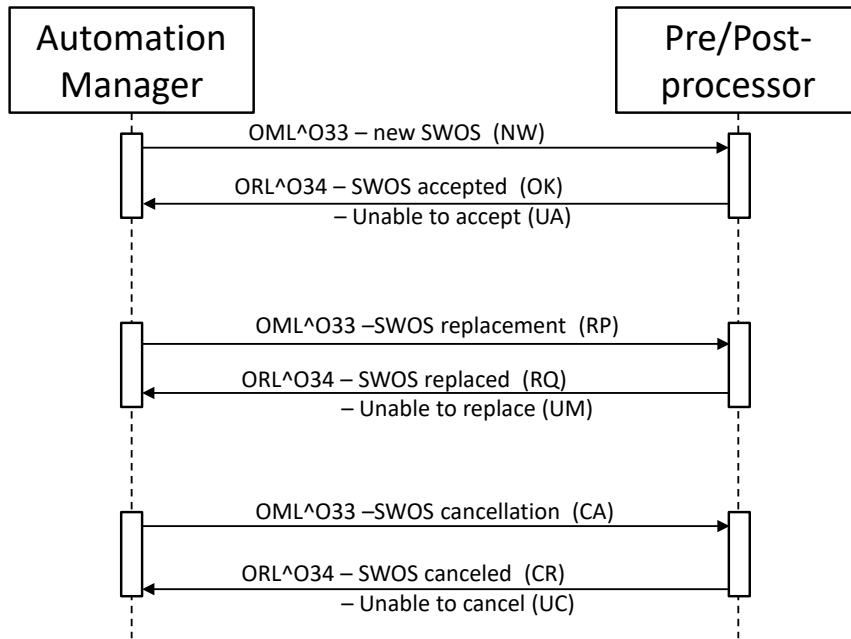

Actor:	Automation Manager
Role:	Converts a work order into a set of SWOS assigned to Pre/Post-processors. Downloads each SWOS to the appropriate Pre/Post-processor.
Actor:	Pre/Post-processor
Role:	Receives SWOS from the Automation Manager

3.6.3 Referenced Standards

HL7 version 2.5.1:

- 1260
- Chapter 4: "Order Entry" --> OML and ORL messages
 - Chapter 7: "Observation Reporting" --> SPM segment
 - Chapter 13: "Clinical Laboratory Automation" --> SAC segment

3.6.4 Messages

1265

Figure 3.6.4-1: SWOS download on Pre/Post-processor

3.6.4.1 Message OML^O33 and its Acknowledgement

3.6.4.1.1 Trigger Events

- New SWOS assigned to Pre/Post-processor: ORC-1 = "NW".
- Request for replacement of SWOS on specimen: ORC-1 = "RP".
- Request for cancellation of SWOS on specimen: ORC-1 = "CA".

1270

Note: Universal Service Identifier is a copy of OBR-4.

3.6.4.1.3 Expected Actions

Table 3.6.4.1.3-1: Expected Actions by Responder in [LAB-21]

Event	Initiator	Responder	Expected action by the responder
New SWOS (NW)	Automation Manager	Pre/Post-processor	Store SWOS and acknowledge with OK.

Event	Initiator	Responder	Expected action by the responder
Request for replacement of SWOS (RP)	Automation Manager	Pre/Post-processor	Replace SWOS and acknowledge with RQ (or UM if unable to replace).
Request for cancellation of SWOS (CA)	Automation Manager	Pre/Post-processor	Cancel SWOS and acknowledge with CR (or UC if unable to cancel).

3.6.5 Security Considerations

1290 None.

3.7 Specimen Work Order Step Query [LAB-22]

3.7.1 Scope

1295 This transaction is used by the Pre/Post-processor to get the SWOS corresponding to a specimen, by querying the Automation Manager after specimen recognition. The transaction provides a query for SWOS on multiple specimens and the reply will convey for each specimen zero or one container and one SWOS.

3.7.2 Actor Roles

Figure 3.7.2-1: Use Case Diagram

1300

Table 3.7.2-1: Actor Roles

Actor:	Pre/Post-processor
Role:	Queries the Automation Manager for a SWOS related to a specimen, and receives the SWOS as the response.
Actor:	Automation Manager
Role:	Manages Work Orders and related SWOS. Responds to queries from the Pre/Post-processor with the appropriate SWOS.

3.7.3 Referenced Standards

HL7 version 2.5.1:

- Chapter 5: "Query" --> QBP and RSP messages

3.7.4 Messages

1305

Figure 3.7.4-1: SWOS query by Pre/Post-processor

3.7.4.1 Message QBP^WOS and its Response RSP^WOS

3.7.4.1.1 Trigger Events

1310 The Pre/Post-processor refers one or more specimens by their ID or their position on its tray, and wants to obtain the corresponding specimen work order steps.

3.7.4.1.2 Message Semantics

3.7.4.1.2.1 QBP^WOS Static Definition

1320 MSH-9 - Message Type (MSG) shall have its two first components respectively valued to "RSP" and "K11".

If the query was not based on the specimen ID, the response shall contain a SAC segment.

The SPECIMEN segment group is not present in case of an erroneous query (e.g., barcode read error).

1325 3.7.4.1.2.3 QPD Segment Static Definition

Table 3.7.4.1.2.3-1: QPD Segment Static Definition

SE Q	LEN	DT	Usage	Card.	TBL#	ITEM#	Element name
1	60	CE	R	[1..1]		01375	Message Query Name
2	32	ST	R	[1..1]		00696	Query Tag
3	80	EIP	C	[0..*]		01756	SPM-2:Specimen Identification
4	80	EI	C	[0..*]		01331	SAC-3:Container Identification
5	80	EI	C	[0..1]		01337	SAC-10:Carrier Identification
6	80	NA	C	[0..1]		01338	SAC-11:Position in Carrier
7	80	EI	C	[0..1]		01340	SAC-13:Tray Identification
8	80	NA	C	[0..1]		01341	SAC-14:Position in Tray
9	250	CE	C	[0..*]		01342	SAC-15:Location

QPD-1 Message Query Name (CE), required.
Must be valued "**WOS^Work Order Step^IHE_LABTF**"

1330 **QPD-2 Query Tag (ST)**, required.
Unique to each query message instance.

QPD-3 Specimen Identification (EIP), conditional.
If this field is valued all other query fields shall be empty, with the exception of QPD-5 (Carrier Identification) and QPD-6 (Position in Carrier). QPD-5 and QPD-6 are informational only.

1335 **QPD-4 Container Identification (EI)**, conditional.
Contains the identification of the container with the exception of QPD-5 (Carrier Identification) and QPD-6 (Position in Carrier). QPD-5 and QPD-6 are informational only.

QPD-5 Carrier Identification (EI), conditional.
Contains the identification of the carrier (also known as Rack).

1340 If this field is valued, then the field "QPD-6: Position in Carrier" shall also be valued.
If these 2 fields (QPD-5,6) are valued all other query fields shall be empty, with the possible exception of the Location field (QPD-9), and the Specimen Identification (QPD-3) or Container Identification field (QPD-4). QPD-5 and QPD-6 are informational only if sent together with QPD-3 and QPD-4.

1345 **QPD-6 Position in Carrier (NA)**, conditional.
Contains the positions of the specimen/aliquot on the carrier (rack).
If this field is valued, then the field "QPD-5: Carrier Identification" shall also be valued.

QPD-7 Tray Identification (EI), conditional.
Contains the identification of the Tray.

1350 **QPD-8 Position in Tray (NA)**, conditional.
Contains the position of the carrier on the tray.

QPD-9 Location (CE), conditional.
Contains the physical location of the specimen.

1355 This field cannot be valued in isolation, it must always be combined with the physical location/position of the specimen on either a carrier or a tray.
This field shall never be used in combination with either the specimen identification or the container identification fields.

3.7.4.1.2.4 RCP Segment Static Definition

Table 3.7.4.1.2.4-1: RCP segment Static Definition

SEQ	LEN	DT	Usage	Card.		TBL#	ITEM#	Element name
1	1	ID	O	[0..1]		0091	00027	Query Priority
2	10	CQ	O	[0..1]		0126	00031	Quantity Limited Request

SEQ	LEN	DT	Usage	Card.		TBL#	ITEM#	Element name
		NM						
		CE						
3	60	CE	O	[0..1]		0394	01440	Response Modality
7	256	ID	O	[0..*]			01594	Segment group inclusion

1360 RCP-1 Query Priority(ID), optional. Fixed to "I" (=Immediate). If no value is given, the default is "I".

RCP-2 Quantity Limited Request(CQ), optional. As for the 1st component "Quantity"(NM), Number of Records which will be returned in each increment of the response. If no value is given, the entire response will be returned in a single increment.

1365 As for the 2nd component "Units"(CE), "RD"(=Records) is always set. If no value is given, the default is RD.

RCP-3 Response Modality(CE), optional. Fixed to "R" (=Realtime). If no value is given, the default is "R".

1370 RCP-7 Segment group inclusion(ID), optional. Specifies those optional segment groups which are to be included in the response. If this field is not valued, all segment groups will be included.

3.7.4.1.3 Expected Actions

Table 3.7.4.1.3-1: Expected Actions by Responder in [LAB-22]

Event	Initiator	Responder	Expected responder action
Query for SWOS. QBP message may have one or more Specimen IDs or Container IDs or locations.	Pre/Post-processor	Automation Manager	Look up for the SWOS corresponding to the specimen(s) of the query, and respond with this (these) SWOS. Even if the Automation Manager cannot find any SWOS for one or more IDs, the RSP message still has as many SPM segments as there were specimens in the query.

3.7.5 Security Considerations

None.

1375 **3.8 Specimen Work Order Step Status Change [LAB-26]**

3.8.1 Scope

This transaction enables the Pre/Post Processor to notify the Automation Manager with the status of the performed specimen work order step (SWOS).

3.8.2 Actor Roles

1380

Figure 3.8.2-1: Use Case Diagram

Table 3.8.2-1: Actor Roles

Actor:	Pre/Post-processor
Role:	Performs a SWOS and notifies the Automation Manager with the status of execution.
Actor:	Automation Manager
Role:	Handles the sequence of SWOS

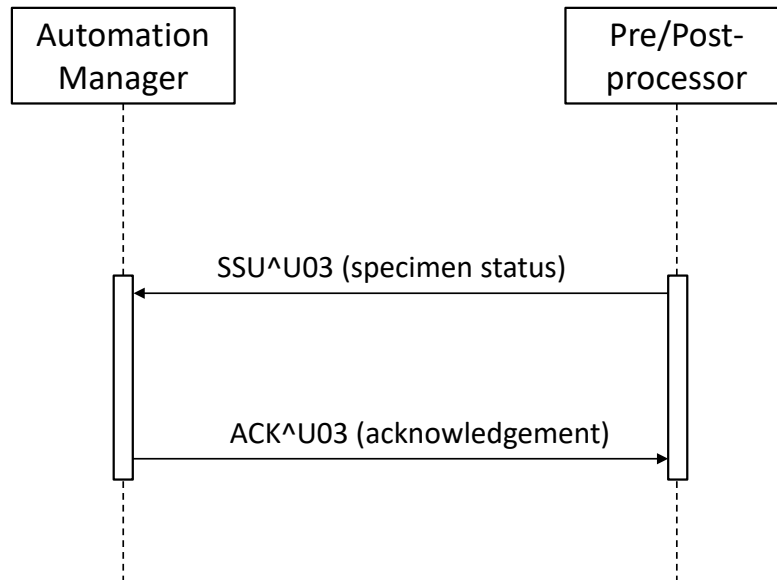

3.8.3 Referenced Standards

HL7 version 2.5.1:

1385

- Chapter 2: "Control" --> generic segments and data types
- Chapter 7: "Observation Reporting" --> SPM segment
- Chapter 13: "Clinical Laboratory Automation" --> SAC segment

3.8.4 Messages

1390

Figure 3.8.4-1: SWOS Status Change

3.8.4.1 Message SSU and its Acknowledgement

3.8.4.1.1 Trigger Events

A SWOS is completed successfully or is terminated in error.

3.8.4.1.2 Message Semantics

1395

3.8.4.1.2.1 SSU^U03 Static Definition

Table 3.8.4.1.2.1-1: SSU^U03 Static Definition^(Note 2)

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
EQU	Equipment Detail	R	[1..1]	13
{	--- SPECIMEN_CONTAINER begin	R	[1..*]	
SAC	Specimen Container Detail	R	[1..1]	13
{ [OBX] }	Additional specimen characteristics	O	[0..*]	7
{ [NTE] }	Additional specimen container information ^(Note 1)	O	[0..*]	7
[{	--- SPECIMEN begin	O	[0..1]	
SPM	Specimen information	R	[1..1]	7
{ [OBX] }	Observation Result (for Specimen)	O	[0..*]	7
}]	--- SPECIMEN end			

Segment	Meaning	Usage	Card.	HL7 chapter
}	--- SPECIMEN_CONTAINER end			

Note 1: This segment is pre-adopted from HL7 v.2.8

Note 2: The SSU message might appear too restrictive to meet future needs for carrying the output data of a SWOS, brought along by specific pre or post processing devices. If such a use case appears in the future for a specific device, alternative messages will be studied to extend this profile.

1400

3.8.4.1.2.2 ACK^U03 Static Definition

Table 3.8.4.1.2.2-1: ACK^U03 Static Definition

Segment	Meaning	Usage	Card.	HL7 chapter
MSH	Message header	R	[1..1]	2
MSA	Message Acknowledgement	R	[1..1]	2
[ERR]	Error	O	[0..1]	2

1405 Field MSH-9 - Message Type (MSG) shall have its three components respectively valued to "ACK", "U03" and "ACK".

3.8.4.1.3 Expected Actions

Table 3.8.4.1.3-1: Expected Actions by Responder in [LAB-26]

Event	Initiator	Responder	Expected responder action
SWOS completed or in error	Pre/Post-processor	Automation Manager	Store the information and acknowledges it.

1410 3.8.5 Security Considerations

None.

Appendices

See PaLM TF-2x.
